

As a long time CW operator and experimenter on 160 meters, I strongly support RM-10352 which preserves 1800-1843 khz. for narrowband modes of operation! I feel that RM-10352 will preserve ample frequency allotmentso that all modes of operation can exist in harmony, and 160 meters will remain the "Gentlemans Band"

Respectfully submitted, Wallace C Eckles W8LRL
